DevOps Lab
How to use it, step by step

A simple guide for trainees. From your first login to your portfolio. Read it once, then keep it open while you work.

Ye guide simple English me hai. Har step ke neeche Hindi me chhota sa matlab bhi hai.

Website: https://devops-lab.mohityeotikar.workers.dev
Lab repo (for incident drills): https://github.com/mohit-yeotikar/devops-lab

1. What you need before you start
2. Create your account
3. Log in
4. Your home page
5. Open Sprint 1
6. Open a ticket and press Start
7. Do the steps, tick "Done means"
8. Explain it (the English coach)
9. Interview tab
10. Log your hours and submit proof
11. Ask the coach when stuck
12. Every week: one incident drill
13. Every week: one mock interview
14. Work log
15. Your portfolio
16. Profile: Hindi help, public portfolio, log out
17. Rules
18. Your daily routine

1 What you need before you start

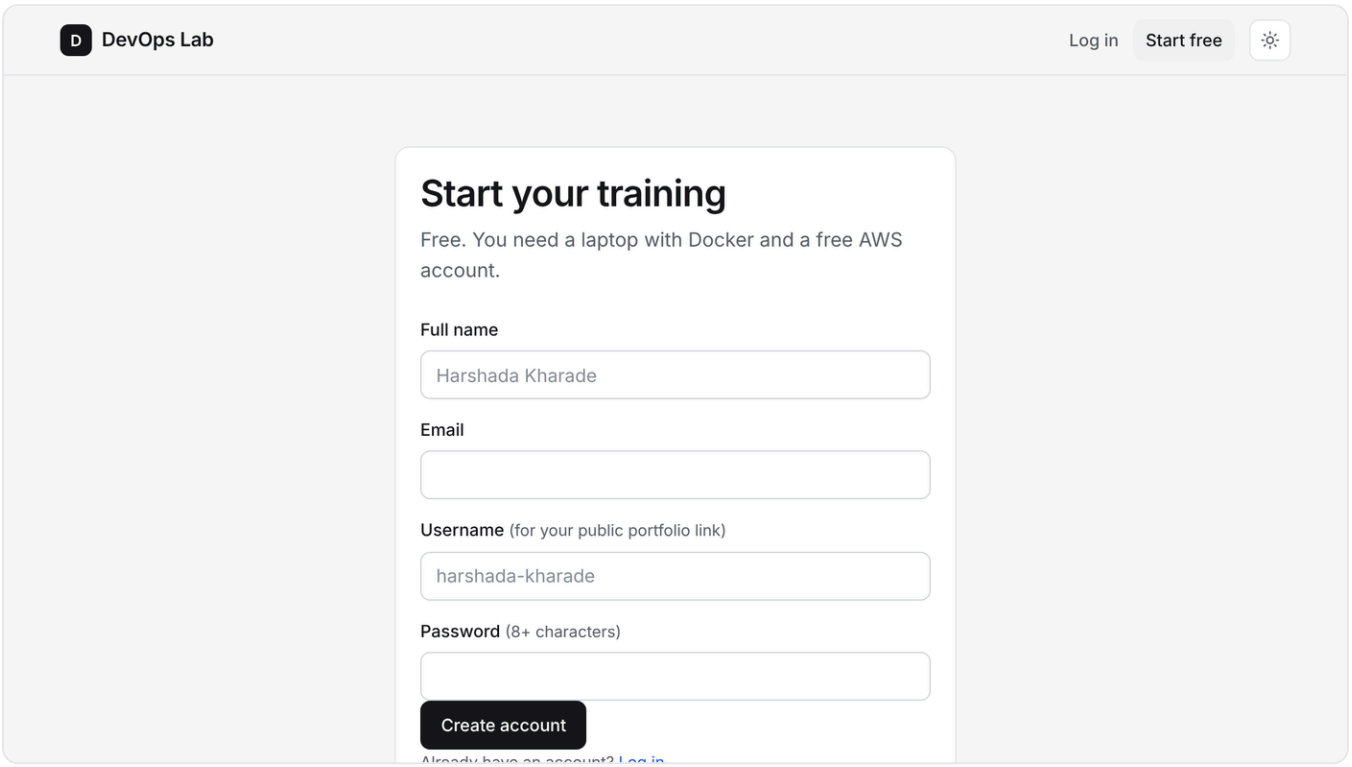

- A laptop with **Ubuntu** (or Windows with **WSL2 + Ubuntu**). Ticket OPS-101 shows how to install WSL2.
- **Docker** on the laptop (needed from Sprint 2 and for every incident drill).
- A **free AWS account** (Free Tier). Nothing in the program costs money. Set a billing alert on day one (Sprint 4 shows how).
- A **GitHub account**. All your code goes there. Reviewers check your repo links.
- About **2 to 4 hours every day**, 5 days a week, for 24 weeks (12 sprints of 2 weeks).

Ubuntu laptop, Docker, free AWS account aur GitHub account chahiye. Roz 2-4 ghante, hafte me 5 din.

2 Create your account

Open the website and click **Start free**. Fill the form:

- **Full name**: your real name, same as on your documents. It will be on your experience letter.
- **Email**: an email you check every day.
- **Username**: small letters, numbers and `-` only. This becomes your portfolio link, for example `/u/harshada-kharade`.
- **Password**: 8 or more characters. Write it down in a safe place.

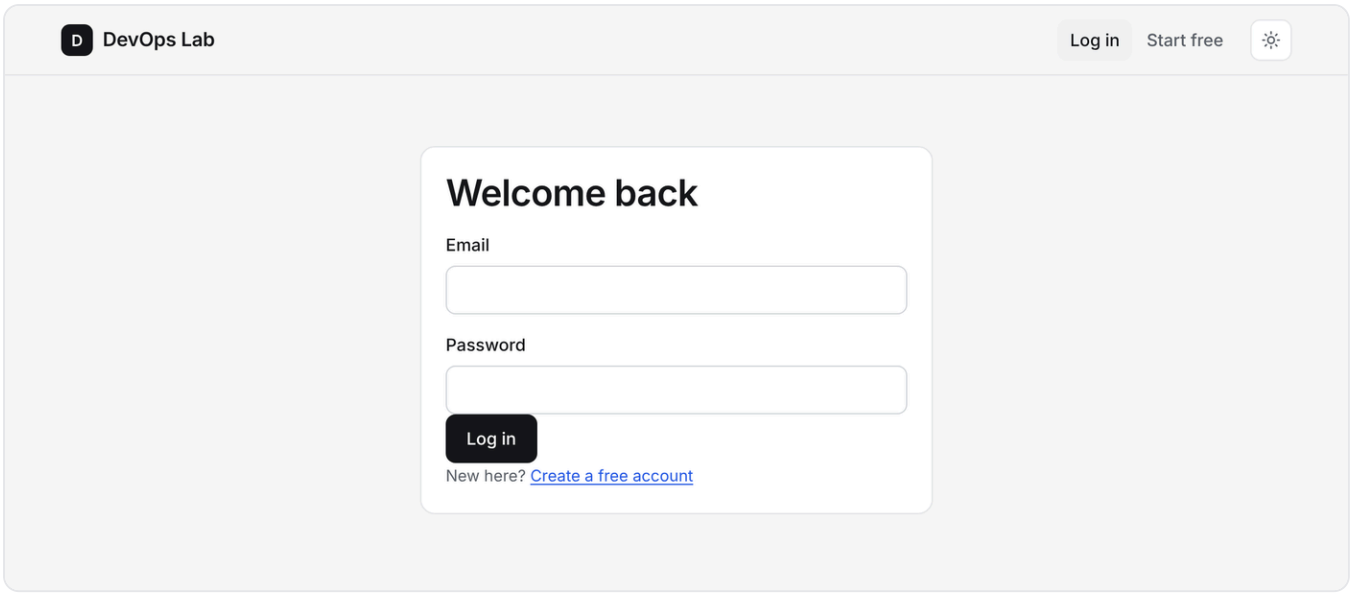

The sign-up page. Click "Create account" when done.

Apna asli naam likho, jo documents pe hai. Username chhote letters me. Password 8+ characters.

3 Log in

Next time, click **Log in**, enter your email and password. You stay logged in on that browser for 30 days.

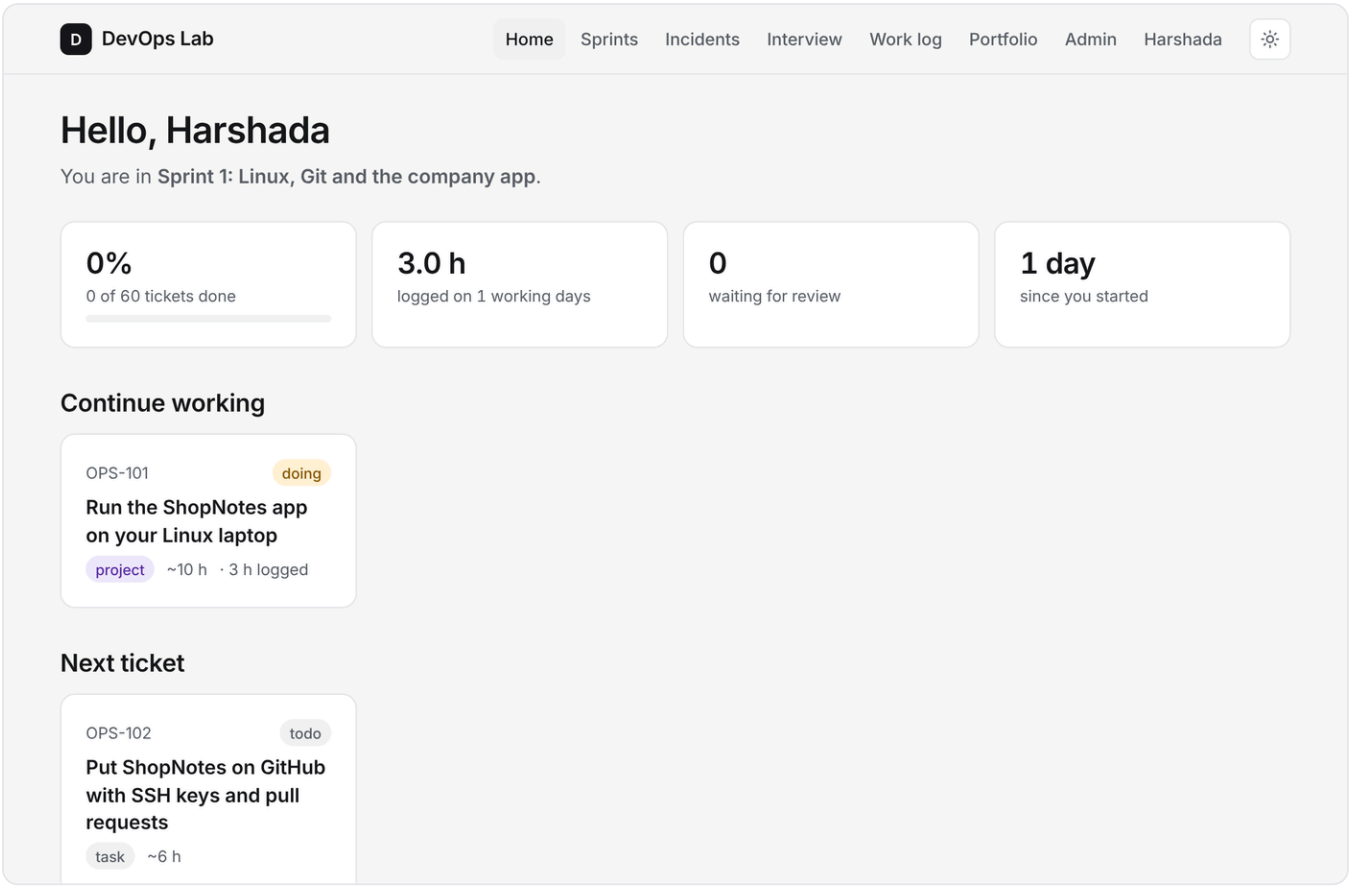

Dobara aane pe Log in pe click karo. Email aur password daalo.

4 Your home page

After login you see your home page. The four boxes at the top are your record:

- **% done**: how many of the 60 tickets are approved.
- **Hours**: all hours you logged, and on how many days.
- **Waiting for review**: tickets you submitted that the reviewer has not checked yet.
- **Days since you started**: counts from your first ticket.

Below that: **Continue working** (your open ticket), **Next ticket**, **Today's plan** and all 12 sprints.

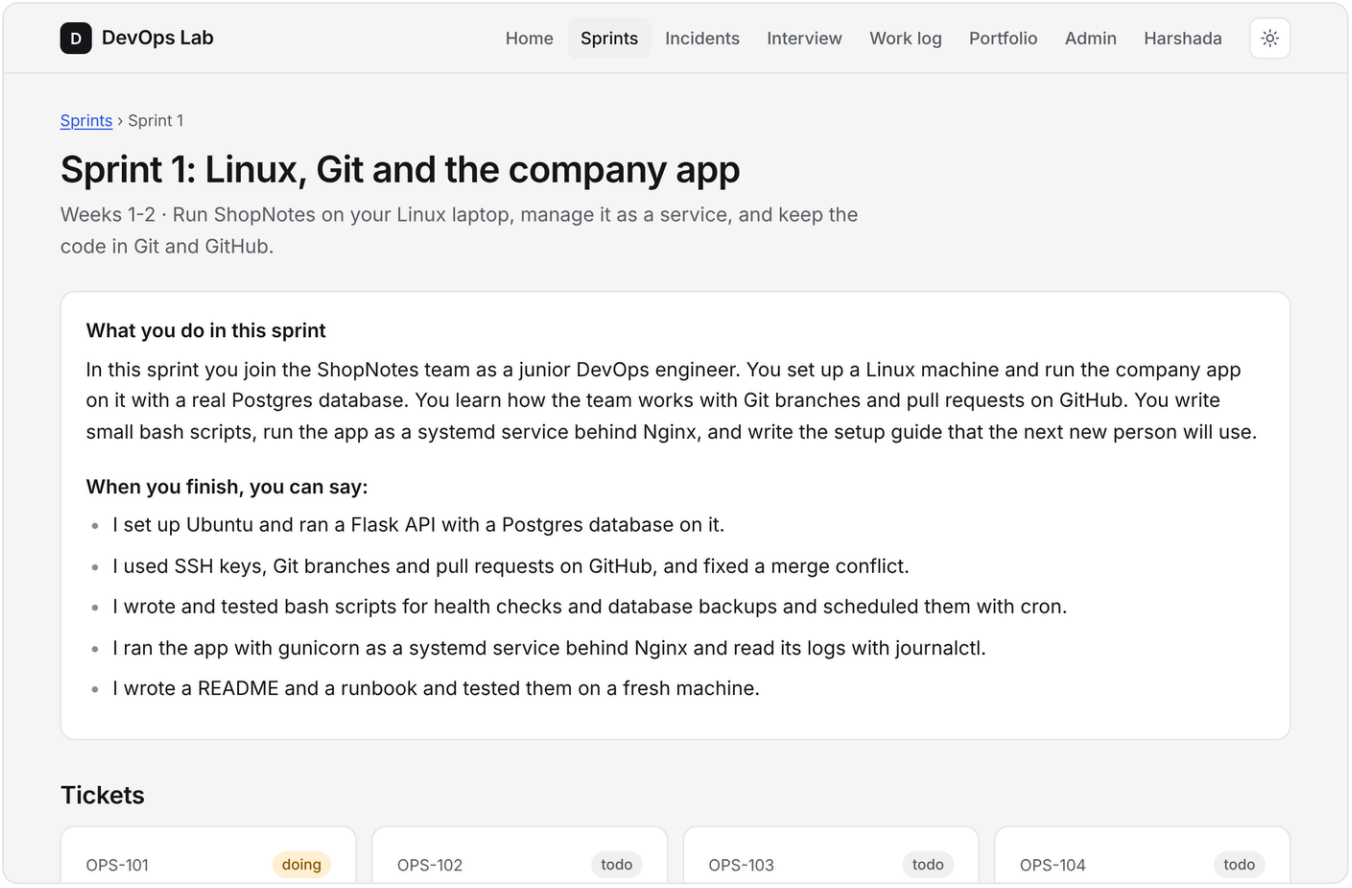

Home. Click any card to open it.

Home page pe tumhara progress dikhta hai. "Continue working" wala ticket roz kholo.

5 Open Sprint 1

Click **Sprints** in the top menu, then **Sprint 1**. A sprint is 2 weeks of work with 5 tickets. Read "What you do in this sprint" first. Do the tickets **in order**: OPS-101, then OPS-102, and so on. Each ticket builds on the one before.

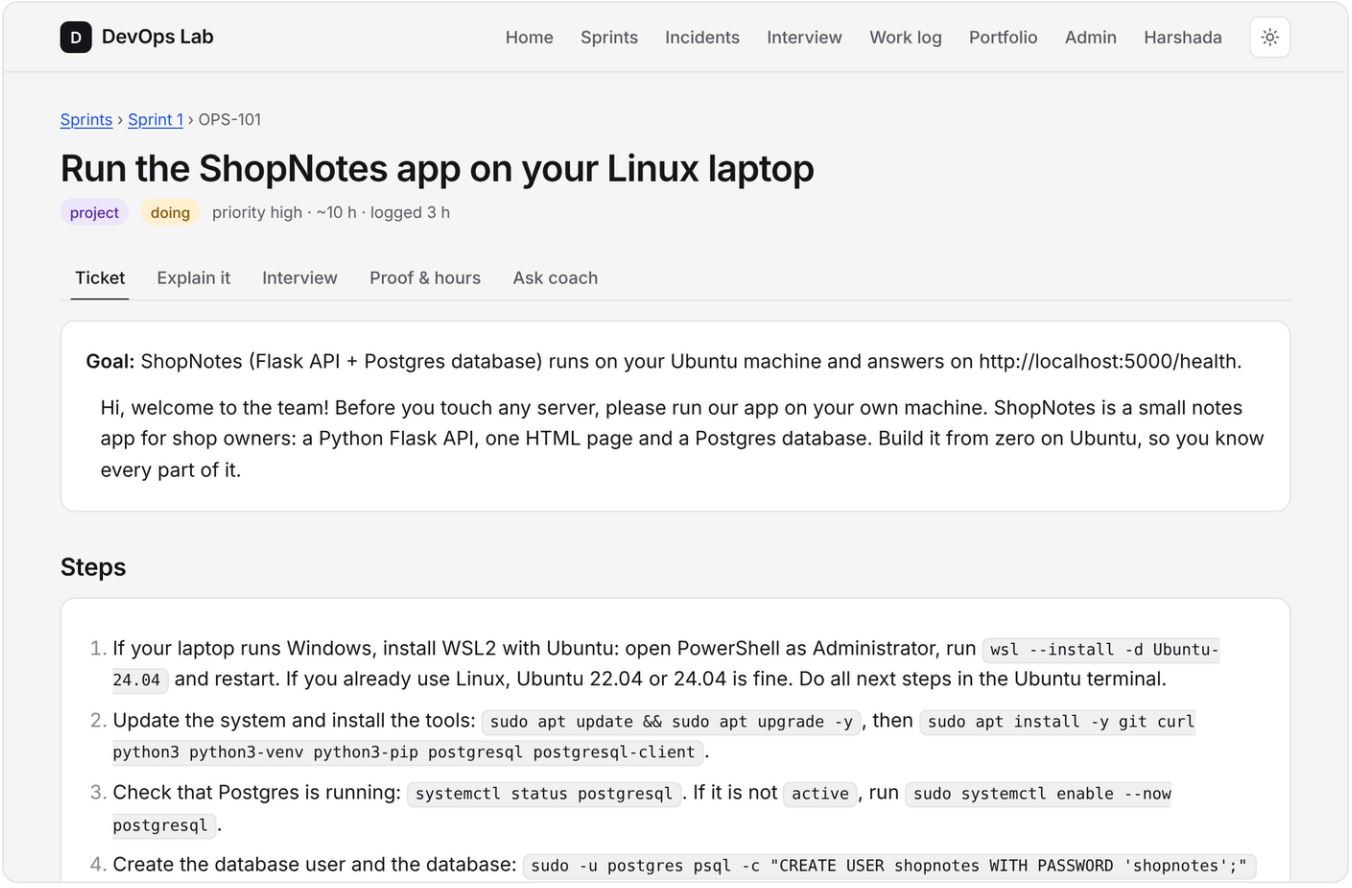

Ek sprint = 2 hafte, 5 tickets. Tickets order me karo, pehla pehle.

6 Open a ticket and press Start

A ticket looks like a message from your team lead at a real company. Read the **Goal** and the message. Then click **Start this ticket**. The status changes to *doing*, and your start date is saved.

The ticket page has five tabs: **Ticket**, **Explain it**, **Interview**, **Proof & hours** and **Ask coach**. You will use all five.

Ticket OPS-101 with its goal, the message from the team lead, and the five tabs.

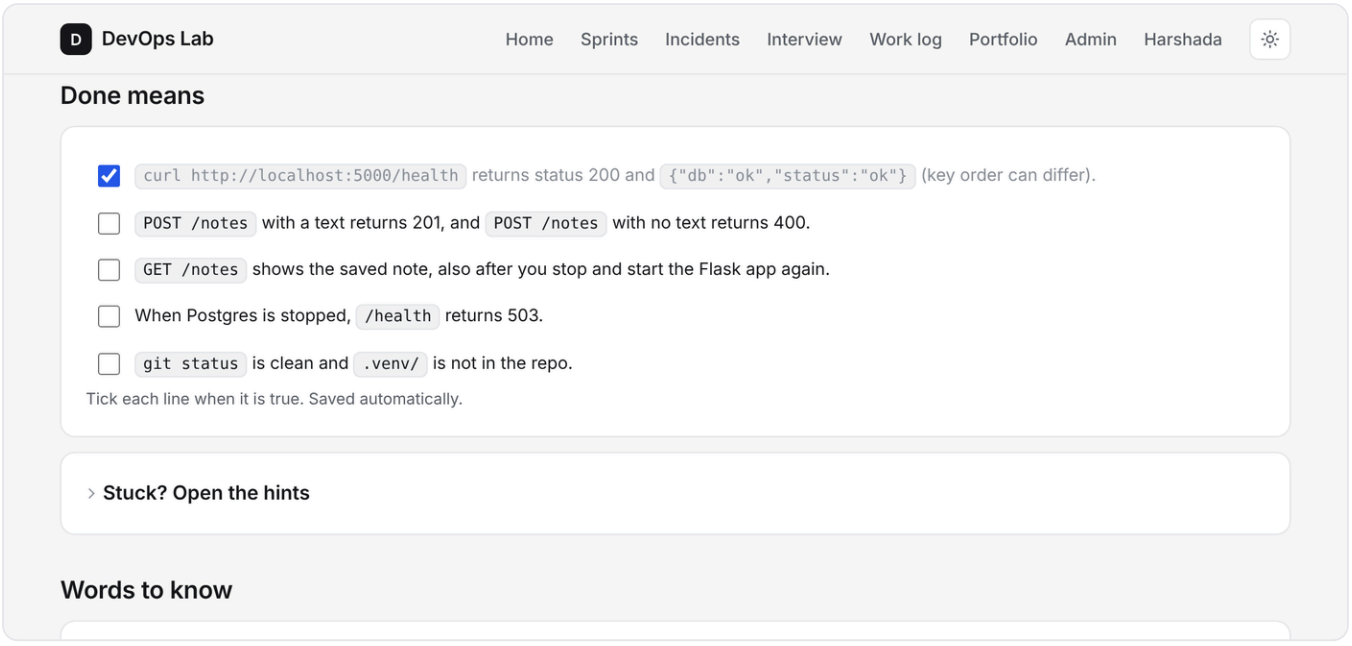

Ticket kholo, Goal padho, "Start this ticket" dabao. Upar 5 tabs hain, sab use karne hain.

7 Do the steps, tick "Done means"

In the **Ticket** tab, follow the **Steps** one by one on your laptop. Type each command yourself. Do not copy-paste a whole block without reading it. If a command fails, read the error, then try again.

Under **Done means** is a checklist. Tick a line only when it is really true on your machine. It saves itself.

Stuck? Open **Stuck? Open the hints**, or use the **Ask coach** tab (step 11). Under **Words to know** are the technical words of this ticket with a Hindi line.

Tick each "Done means" line when it is true. It is saved automatically.

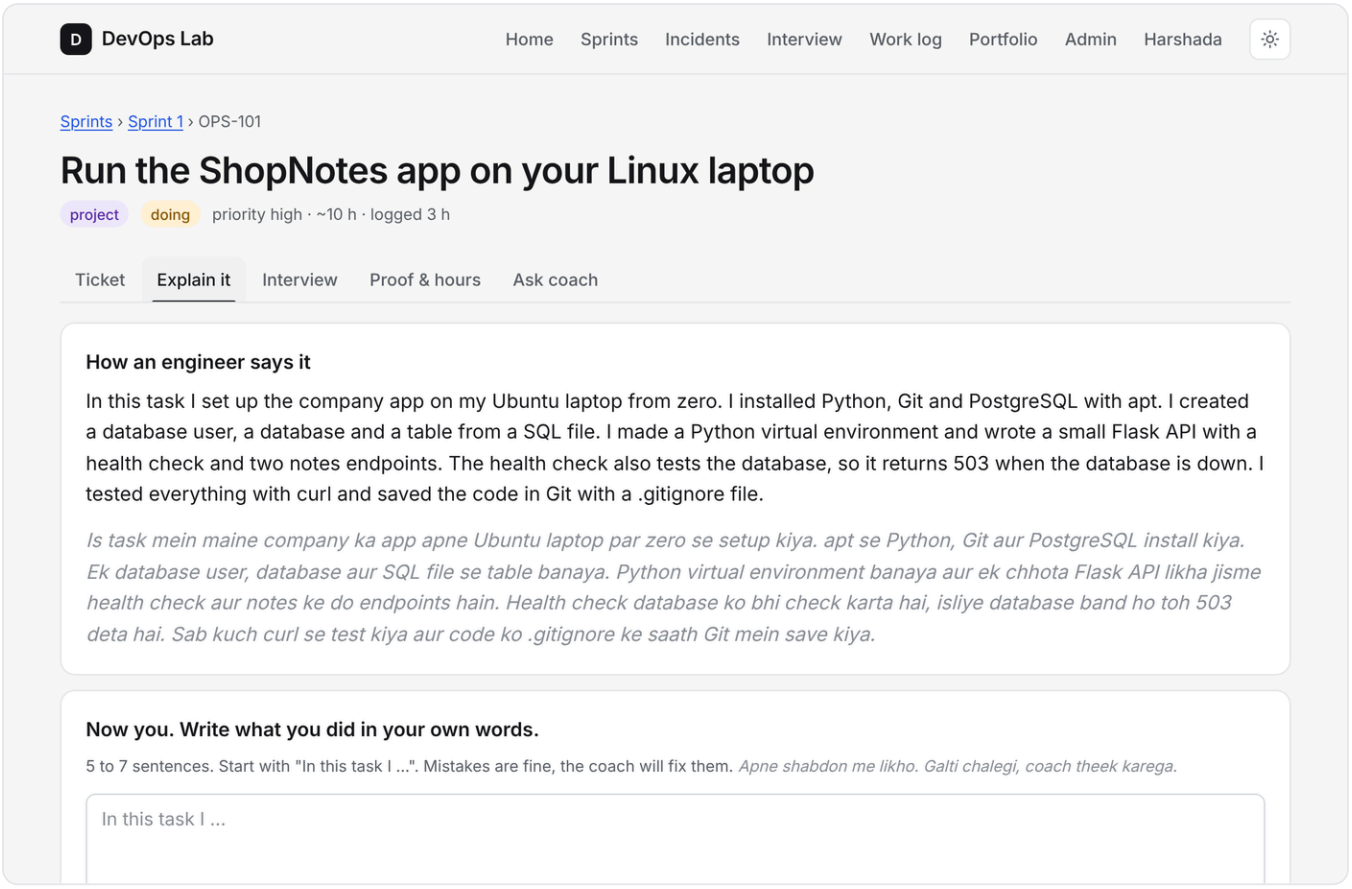

Steps laptop pe karo, commands khud type karo. "Done means" me tick tab karo jab sach me ho gaya ho.

8 Explain it (the English coach)

This is the most important tab for your interviews. First read **How an engineer says it**: a short model text in simple English, with the same idea in Hindi below.

Then write **your own** 5 to 7 sentences in the box. Start with "In this task I ...". Use past tense: "I installed", "I created", "I tested". Mistakes are fine. Click **Check my explanation**.

The coach gives you: a **score out of 10**, your text with the **English corrected**, what was missing, and a short **script you can say** in an interview. Read the script aloud 3 times. Then write again if the score is under 7.

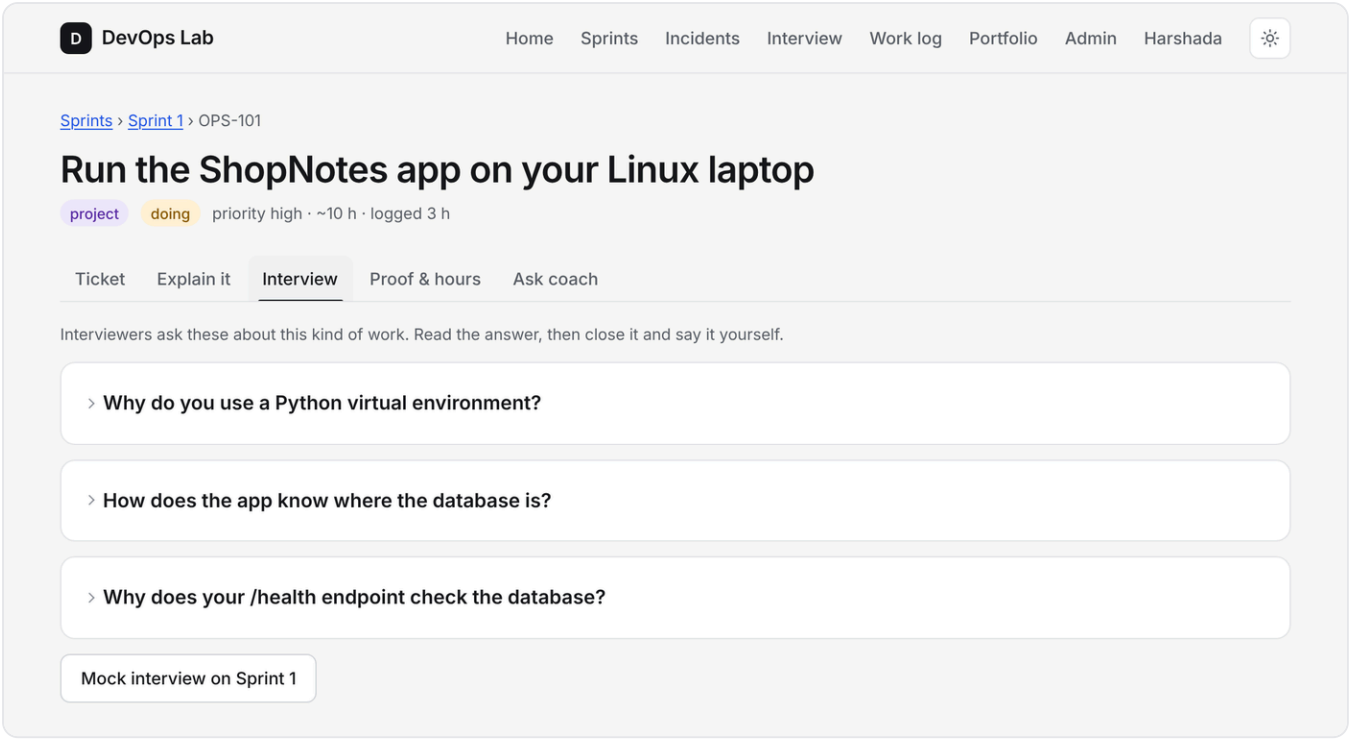

Explain it: read the model text, then write your own words below.

Apne shabdon me 5-7 line likho, "In this task I ..." se shuru karo. Coach English theek karega, score dega aur bolne ka script dega. Script 3 baar zor se padho.

9 Interview tab

Three questions an interviewer asks about this kind of work, each with a model answer. Open a question, read the answer, close it, and **say it yourself** without looking. Do this for every ticket. At the bottom is a button to start a mock interview on this sprint.

Har ticket ke 3 interview sawaal hain. Jawab padho, band karo, phir khud bolo.

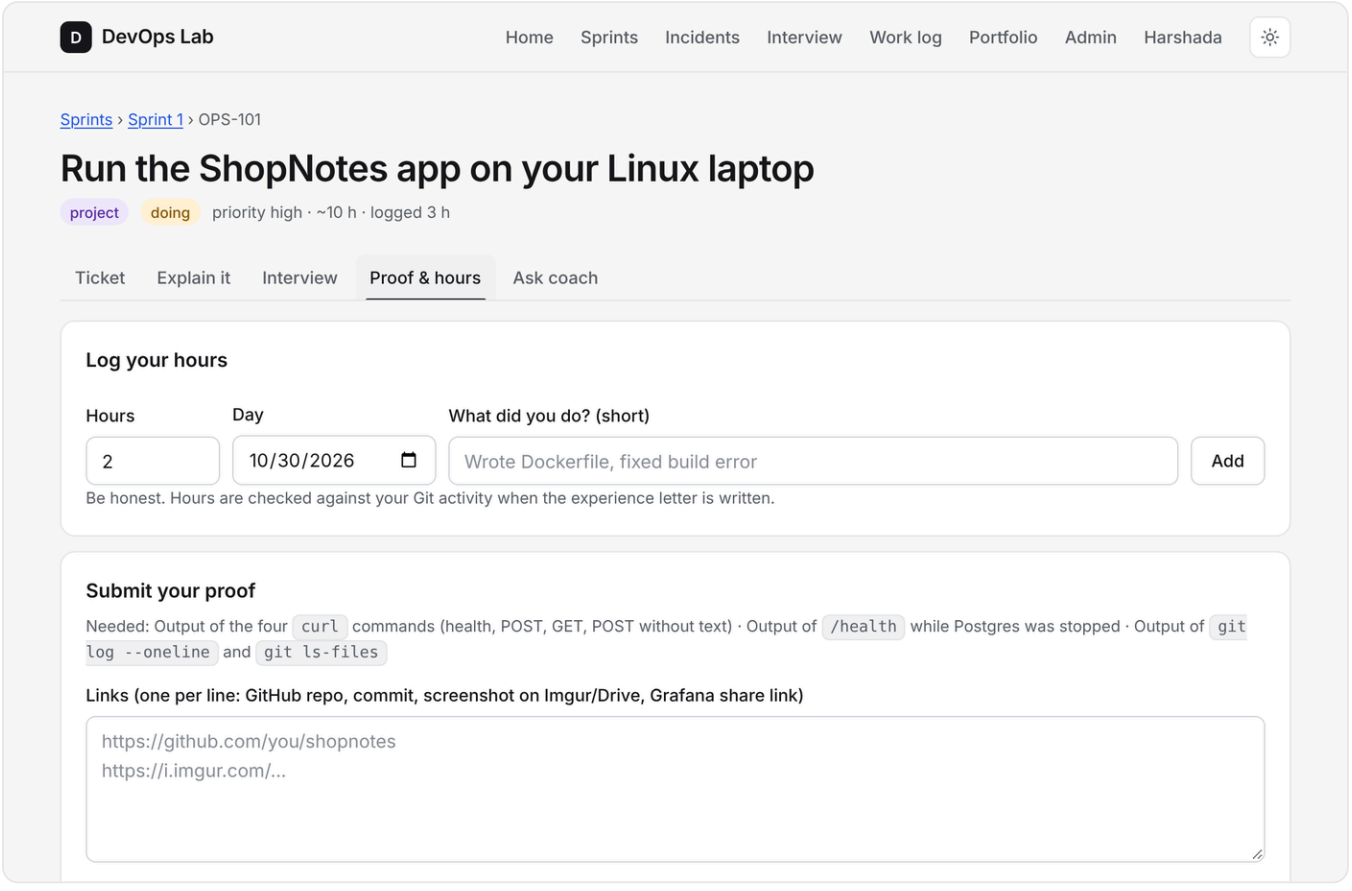

10 Log your hours and submit proof

Every time you stop working, open **Proof & hours** and log the hours: how many hours, which day, and one short line about what you did. Click **Add**. Be honest. Your hours are compared with your Git activity before the experience letter is written.

When all "Done means" lines are true, **submit your proof**:

- **Links**, one per line: your GitHub repo, the commit, a screenshot (upload it to Imgur or Google Drive and paste the link), a Grafana share link, and so on. The ticket says exactly what is *Needed*.
- **Notes for the reviewer**: what works, what was hard, and paste the command output the ticket asks for.

Click **Submit for review**. The status becomes *in review*. You can start the next ticket while you wait. The reviewer will **approve** it or **ask for changes** with a note. If changes are asked, fix them and submit again.

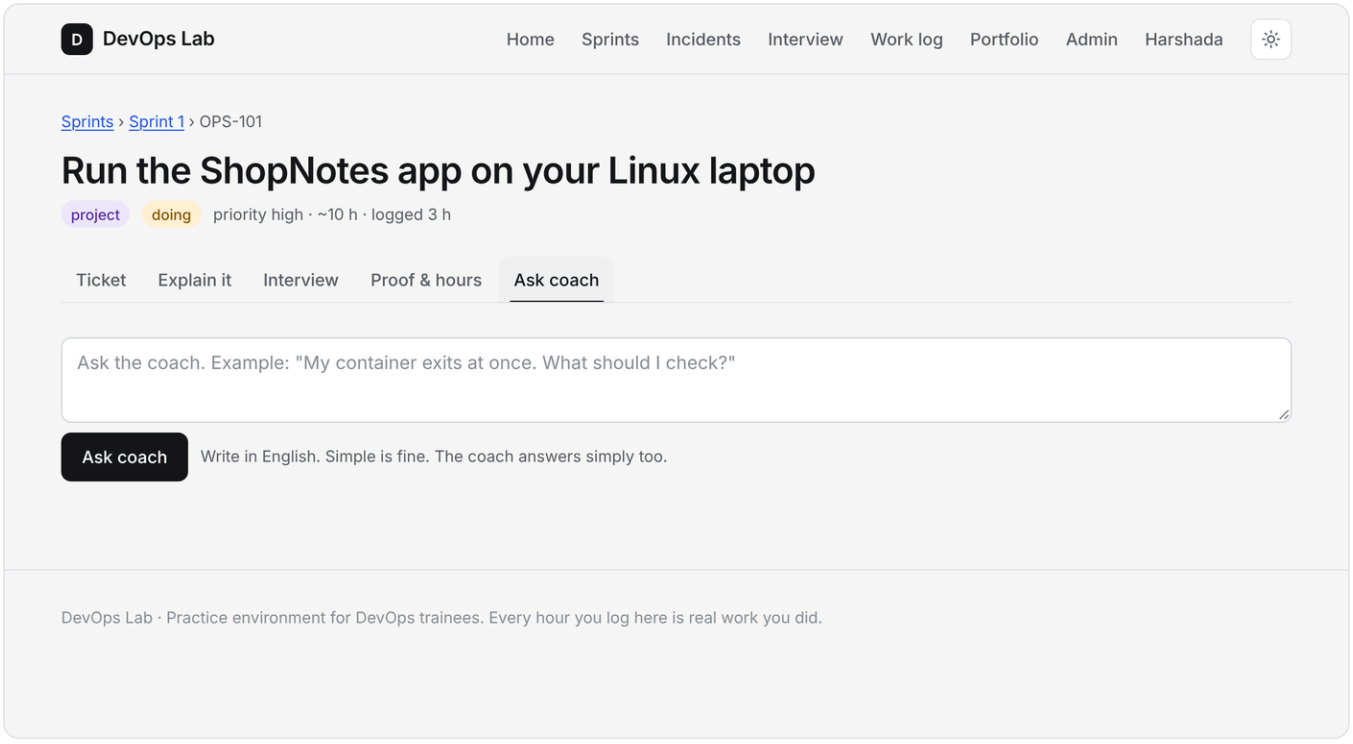

Log hours at the top. Submit links and notes at the bottom.

Kaam band karte hi hours likho. Jab sab "Done means" sach ho, GitHub link, screenshot link aur notes daal ke "Submit for review" dabao. Reviewer approve karega ya changes maangega.

11 Ask the coach when stuck

The **Ask coach** tab is a chat. The coach knows this ticket. Write in simple English what you tried and what you see. Example: *"I ran docker compose up. The app container exits at once. What should I check?"* The coach answers simply and will not do the work for you. Also use it to ask the meaning of a word.

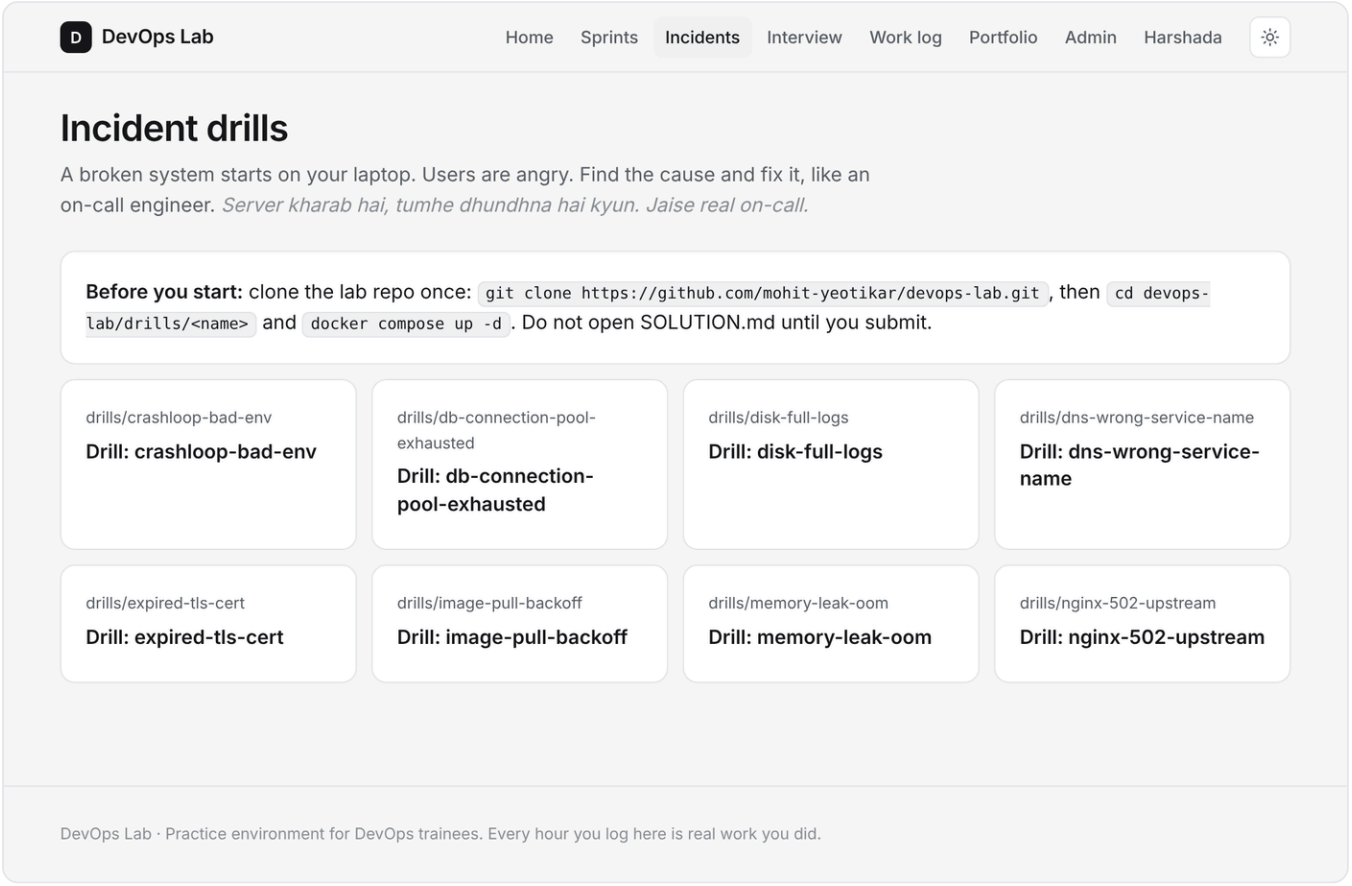

Atak gaye? Coach ko English me likho: kya kiya, kya dikh raha hai. Coach simple English me samjhayega.

12 Every week: one incident drill

Click **Incidents** in the top menu. A drill is a broken system that runs on your laptop with Docker. Users are "angry". You must find the cause and fix it, like an on-call engineer. There are 8 drills.

1. Once: `git clone https://github.com/mohit-yeotikar/devops-lab.git`
2. Open a drill on the website and read the story and the symptoms.
3. On the laptop: `cd devops-lab/drills/<name>` then `docker compose up -d`
4. Investigate: `docker compose ps`, `docker compose logs`, `curl`, look at the config files.
5. On the website, write the **root cause** (1-3 sentences), **how you fixed it**, and the **minutes** it took. Click Submit.
6. The coach says *correct*, *partly* or *wrong*. Clean up with `docker compose down -v`.

> **Do not open SOLUTION.md before you submit.** The point is to find it yourself. The Solution tab opens on the website after a correct answer or after two tries.

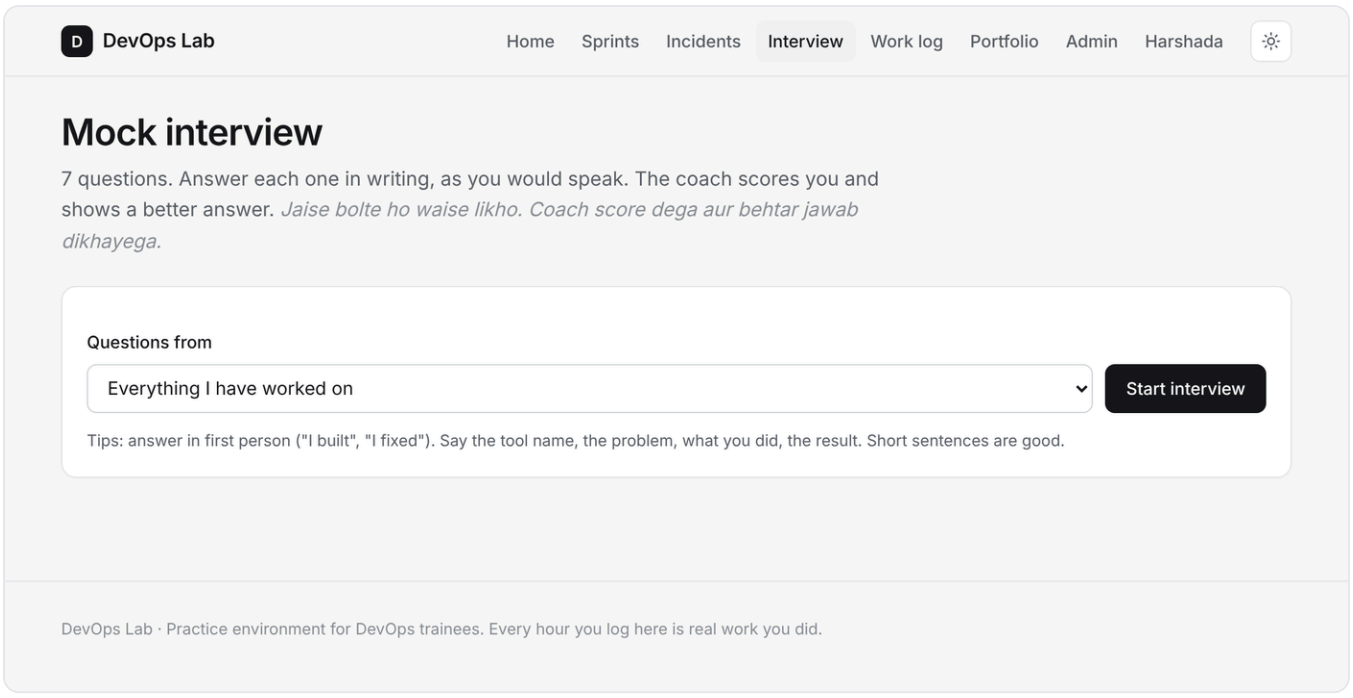

Hafte me ek drill. Laptop pe Docker se kharab system chalao, wajah dhundho, website pe root cause likho. SOLUTION.md submit se pehle mat kholo.

13 Every week: one mock interview

Click **Interview**. Choose **Everything I have worked on** or one sprint, then **Start interview**. You get 7 questions, one at a time. Write your answer the way you would **speak** it: first person, short sentences, the tool name, the problem, what you did, the result.

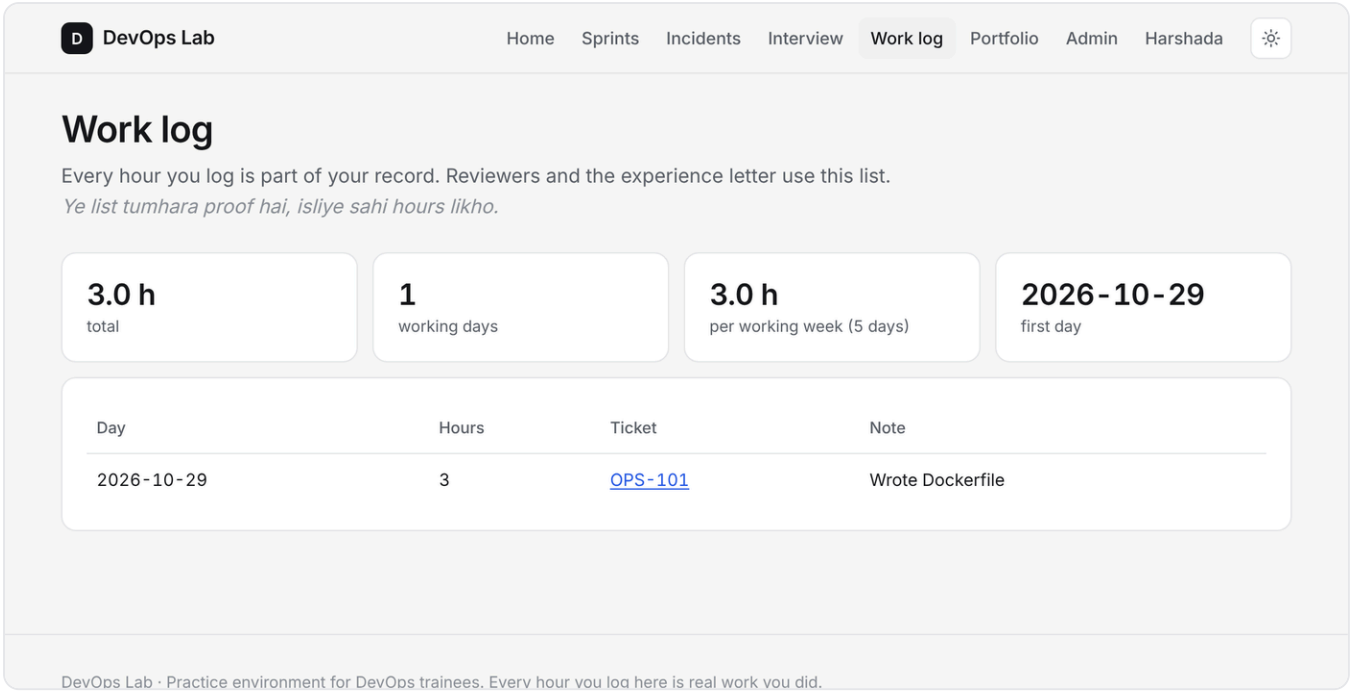

After each answer you get a score, feedback and a **better answer**. At the end you get an average. Under 7? Read every "better answer" aloud and redo the interview in two days. Your last three scores show on your portfolio.

Hafte me ek mock interview, 7 sawaal. Jaise bolte ho waise likho. 7 se kam score? "Better answer" zor se padho, 2 din baad dobara do.

14 Work log

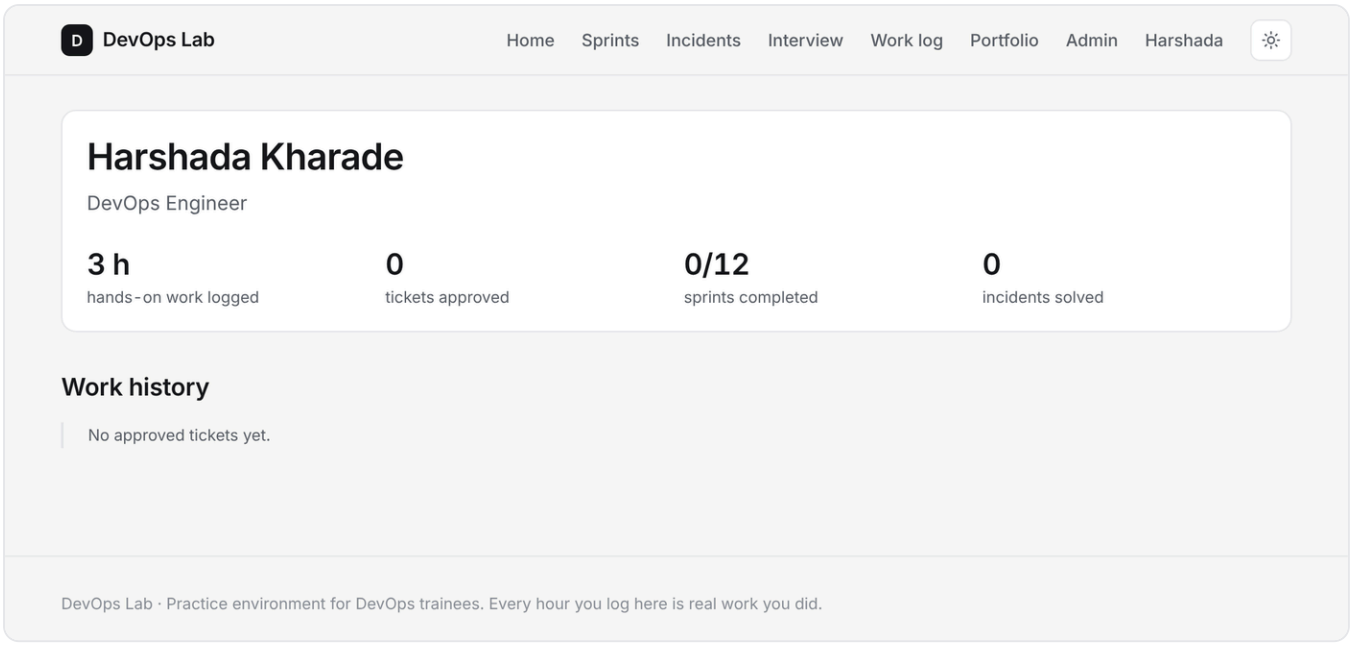

Click **Work log** to see every hour you logged: total, working days, hours per week, and the full list. The reviewer and the experience letter use this list. It should grow every working day.

Work log tumhara proof hai. Ye roz badhna chahiye.

15 Your portfolio

Click **Portfolio**. This is your public page: `https://devops-lab.mohityeotikar.workers.dev/u/<your-username>`. It shows your hours, approved tickets, finished sprints, solved incidents, your projects with your own explanation and repo links, and the skills you demonstrated. Only **approved** work appears here. Put this link on your resume and LinkedIn.

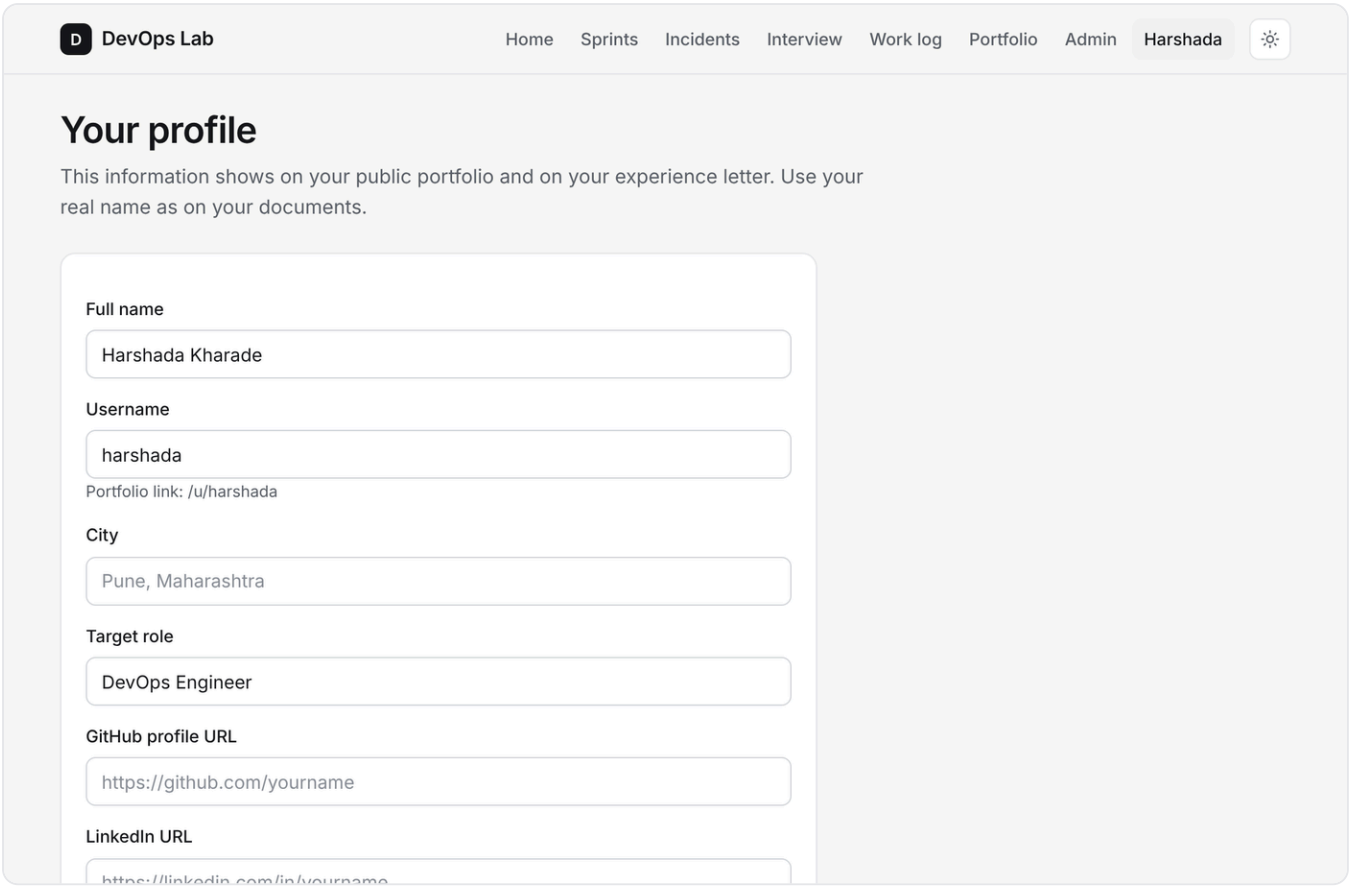

Portfolio tumhara public page hai. Sirf approved kaam dikhta hai. Ye link resume aur LinkedIn pe daalo.

16 Profile: Hindi help, public portfolio, log out

Click your name in the top menu. Here you can set your city, target role, GitHub and LinkedIn links and a short bio (2-3 simple English sentences; it shows on your portfolio).

- **Show Hindi help lines**: on at the start. Switch it off after a few sprints, when you can read the English alone. In interviews there is no Hindi.
- **Make my portfolio public**: keep it on, so employers can open your link.
- **Log out** is at the bottom. The sun/moon button in the top right switches the website to dark colours if you like.

Profile me GitHub, LinkedIn aur bio daalo. Kuch sprints ke baad Hindi lines band kar do, English akele padhne ki aadat banao.

17 Rules

1. **Be honest with hours.** Log only the time you really worked. Hours are checked against your Git commits.
2. **Your own words.** In "Explain it" and in interviews, never paste the model text. The coach notices.
3. **Your own repo.** All code in your own GitHub account, with commits made by you, on the days you logged.
4. **Never spend money.** Stay in the AWS Free Tier. Set the billing alert. Stop EC2 instances when you finish for the day.
5. **Do not open SOLUTION.md** of a drill before you submit your answer.
6. **Write in English** on the website, even with mistakes. That is how your English gets better.

The experience letter at the end states exactly what the log shows: first and last day, hours, sprints, approved tickets and incidents. Employers verify experience letters. A letter that is not true ends your offer, so the record must be real.

Sach hours, apne shabd, apna repo, paisa kharch nahi, solution pehle nahi, English me likho. Experience letter me wahi aayega jo log me hai.

18 Your daily routine

When	What
Every working day	Open **Home**. Work 2-4 hours on your open ticket. Log the hours when you stop.
Every ticket	Tick "Done means", write "Explain it" until score 7+, read the 3 interview answers aloud, submit proof.
Once a week	One **incident drill** and one **mock interview**.
Every 2 weeks	Finish the sprint. Check that every ticket is submitted. Start the next sprint.
When the reviewer asks for changes	Read the note, fix it the same day, submit again.

Start now: log in, open Sprint 1, press **Start this ticket** on OPS-101. *Abhi login karo, Sprint 1 kholo, OPS-101 start karo.*
